Seriously, I hope you don't ever come in here again. It's not the first time I've been called out for the rude and ignorant things I say in this forum. I'm not going to let it go because I'm sure as hell not gonna turn a kid on to showing their tits and getting their asshole ripped off by some fat old man. Synthesis of penta- and hexa-coordinate vanadium(IV) complexes and crystal structures of the complexes $[\text{VO}(\text{OCOCH}_3)_2(\text{phen})]_n$ ($n = 1-6$). The first reactions of the vanadium(IV) compound $[\text{VO}(\text{acac})_2]$ (1) with diethyl oxalate, the ketone oxazoline, or the dialkyl acetylenedicarboxylate oxalate ($\text{L} = \text{CH}_3\text{COOR}$; $\text{R} = \text{Et, Ph}$) in the presence of 4-pyridinecarboxaldehyde (4-pyH) or 3-methyl-4-pyridinecarboxaldehyde (3-pyH) afford the octa- and nona-coordinate complexes $[\text{VO}(\text{L})(4\text{-py})]_n$ (2-4) and $[\text{VO}(\text{L})_2(3\text{-py})]_n$ (5, 6) in excellent yields. The reaction of 1 with the ketone oxazoline yields the binuclear complex $[\text{VO}(\text{OCOCH}_3)_2(2\text{-py})]_2$ (7) in good yield. Crystal structures of 2-4 have been determined. Complex 2 is a trigonal bipyramidal complex in which the oxazoline ligand occupies the meridional position. Complex 3 is a monomeric complex in which the oxazoline ligand is in 82157476af
